Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                      FACTORS AND INTERLEUKINS.
SUBBURIT: Homodimer (soluble isoform) (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein. Two sol isoforms are also produced by alternative splicing. On isoform 3/E6, is biologically active, while the other, 4/E6Deltal6, is inactive.
ALTERNATIVE PRODUCTS: 4 isoforms; 1/6C (shown here), 2 and 4/E6Deltal5; are produced by alternative splicing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           INOSITOL PHOSPHOLIPIDS HYDROLYSIS. PLAYS A CRITICAL ROLE IN THE FINE-TUNING OF INHIBITORY SYNAPTIC TRANSMISSION. PRE-SYNAPTIC GABA-B-R INHIBIT NEUROTRANSMITER RELEASE BY DOWN-REGULATING HIGH-VOLTAGE ACTIVATED CALCIUM CHANNELS, WHEREAS POSTSYNAPTIC GABA-B-R DECREASE NEURONAL EXCITABILLITY BY ACTIVATING A PROMINENT INWARDLY RECTIFYING POTASSIUM (KIR) CONDUCTANCE THAT UNDERLIES THE LATE INHIBITORY POTSSYNAPTIC PRENTIALS. NOT ONLY IMPLICATED IN SYNAPTIC INHIBITION BUT ALSO IN HIPPOCAMPAL LONG-TERM POTENTIATION, SLOW WAVE SLEEP, MUSCLE RELAXATION AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: RECEPTOR FOR GABA. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G-PROTEINS THAT INHIBITS ADENYLYL CYCLASE ACTIVITY, STIMULATES PHOSPHOLIPASE A2, ACTIVATES POTASSIUM CHANNELS, INACTIVATES VOLTAGE-DEPENDENT CALCIUM-CHANNELS AND MODULATES INOSITOL PHOSPHOLIPIDS HYDROLYSIS. PLAYS A CRITICIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 56:288-295(1999).

FUNCTIONAL ASSOCIATION Of U2 SNRNP with the ATP-independent RT spliceosomal complex E.";
RL Mol. Cell 5:779-787(2000).
RL Mol. Cell 5:791-787(2000).
RESEMBLY FORMED BY THE SPLICING FACTOR SF3A REQUIRED FOR THE SESENTIAL, IT MAY ANCHOR U2 SNRNP TO THE PRE-MRNA. MAY ALSO BE CELL COMPONENT OF SPLICING FACTOR SF3A WHICH IS COMPOSED OF THREE SUBUNITS: COMPONENT OF SPLICING FACTOR SF3A WHICH IS COMPOSED OF THREE SUBUNITS: SF3A3/SAP61, SF3A2/SAP62, SF3A1/SAP114. SF3A ASSOCIATES WITH THE SPLICING FACTOR SF3B AND A 12s RNA UNIT TO FORM THE U2 SMALL NUCLEAR RIBONUCLEOPROTEINS COMPLEX (U2 SNRNP).
CC INTERACTS WITH SF3A3.
